

## **XMI Writer UML Activity Graph Plugin 1.0 Requirements Specification**

### **1. Scope**

#### **1.1 Overview**

The XMI Writer UML Activity Graph Plugin component provides the ability to write the ActivityGraph structures to XMI format. The transformer will be invoked by the XMI Writer with each of the ActivityGraph elements. It will write the response to the output print stream.

#### **1.2 Logic Requirements**

##### *1.2.1 ActivityGraph2XMITransformer*

The component will provide this class. The transformers will receive an ActivityGraph as an object and the output print stream. It will transform the activity graph to XMI and write the response to the output stream.

The elements should be written completely only if they are present on the logical containment hierarchy. Otherwise, a reference should be written.

##### *1.2.2 Unknown element type*

There should be an option to ignore the unknown elements, or to throw an exception.

##### *1.2.3 DTD file*

The XMI output will conform to the provided DTD schema.

#### **1.3 Required Algorithms**

None.

#### **1.4 Example of the Software Usage**

The component will be used in the TopCoder UML Tool to write the XMI files.

#### **1.5 Future Component Direction**

None.

### **2. Interface Requirements**

#### *2.1.1 Graphical User Interface Requirements*

None.

#### *2.1.2 External Interfaces*

The design must follow the interface found in the class diagram with the component interfaces. The designer is encouraged to add to the existing interface, but not to remove anything.

#### *2.1.3 Environment Requirements*

- Development language: Java 1.5
- Compile target: Java 1.5

#### *2.1.4 Package Structure*

com.topcoder.uml.xmi.writer.transformers.activitygraph

### **3. Software Requirements**

#### **3.1 Administration Requirements**

3.1.1 *What elements of the application need to be configurable?*

None.

#### **3.2 Technical Constraints**

3.2.1 *Are there particular frameworks or standards that are required?*

None

3.2.2 *TopCoder Software Component Dependencies:*

- UML Model components
- UML Model Manager

**\*\*Please review the [TopCoder Software component catalog](#) for existing components that can be used in the design.**

3.2.3 *Third Party Component, Library, or Product Dependencies:*

None

3.2.4 *QA Environment:*

- Solaris 7
- RedHat Linux 7.1
- Windows 2000
- Windows 2003

#### **3.3 Design Constraints**

The component design and development solutions must adhere to the guidelines as outlined in the TopCoder Software Component Guidelines. Modifications to these guidelines for this component should be detailed below.

#### **3.4 Required Documentation**

3.4.1 *Design Documentation*

- Use-Case Diagram
- Class Diagram
- Sequence Diagram
- Component Specification

3.4.2 *Help / User Documentation*

- Design documents must clearly define intended component usage in the 'Documentation' tab of Poseidon.
